Simply put: BIM is a process for intelligent 3D models integrated into a single model from which you can extract an enormous amounts of data.

A virtual building is created ensuring that every single component of your project works. Long before you run into problems in the field that you might have overlooked in a traditional 2D design environment.

BIM is the future of building construction and will change the way architects and builders work.

#### BIM supports:

- ▶ better building design
- ▶ better building construction
- ▶ better building operation

Wefatherm Revit content packages support this change in a leading way by introducing intelligent content for a user friendly BIM experience.

# Achieve more using Wefatherm Revit content

Wefatherm has adopted BIM to support the future of construction

## Why use the Wefatherm Revit content packages

### Fast design with intelligent content

Wefatherm introduces Revit content packages for BIM with intelligent assistance. The built-in smart routing allows you to drastically reduce your design time. Creating accurate building designs has never been faster.

### Accurate design based on real installation practices

The smart files will help you to automatically pick the right products for all your direction changes and branches. Change in diameter and reducers are placed automatically without the hassle to re-enter your library. The Wefatherm Revit content packages create true 'as built' designs.

### Full content for a single system

Wefatherm has built their Revit content to include all available products in their range, allowing you to virtually build a specialist water supply system.

### Future proof

By entering your contact details with Wefatherm before downloading, we can ensure you are kept up to date on any product change and subsequent change in the Revit content packages. Our packages are available at Wefatherm only, ensuring a single point of data. The content is currently available in Revit versions 2014, 2015, 2016 and 2017. Convenient for all users.
