

# Specialist Water Supply Systems

PP-R pipe system

Ensure reliability

# Specialist Water Supply Systems

## Protecting the source

Water is the source for life and comfort. Creating a pipe system for supplying water is now more of an accomplishment than ever.

Today, your clients are more demanding and end-user expectations are higher, while legislative and environmental compliance place additional pressures on construction teams.

Increasingly, water supply systems are called upon to go beyond basic supply to deal with drinking water, hot tap water and sanitary applications requiring special treatment.

## This is Specialist Water Supply.

Wefatherm believes that acknowledging the specific challenges you face - and identifying the dedicated expertise and resources that are required to overcome them - is the first step to protect this source.

**Together we can help you to ensure reliability.**

## Maintaining your reputation

As a Consulting Engineer, your reputation depends on ensuring the water supply system you want installed delivers the expected quality and comfort.

When installing water supply systems, your position near the completion of a project increases the pressure on getting the job done on time and on budget.

Wefatherm offers you the reassurance of providing the right solution to tackle even the most complex challenges and realise the outcome you want.

For confidence, not compromise.

# Demand a specialist

Today the buildings are getting complex, making the (drinking) water systems ever more complex. From multi story buildings, offices to single occupant houses, Wefatherm is more than a pipe system. To make today's complex installations demands a combination of cost-effective pipe design, applied technology and dedicated training.

The Wefatherm PP-R pipe systems can be applied for typical domestic water supply systems:

## Drinking water

Drinking water is considered fresh water up to a temperature of 25°C for drinking and preparing food.

## Hot tap water

Hot tap water is heated drinking water up to a temperature of 60°C.

## Sanitary applications

For domestic appliances, such as sanitary flush systems, washing and irrigation, drinking water quality is not required.

## Ensure reliability

Wefatherm PP-R water supply systems have been used for many years in areas of application where the pipe system has to meet high standards of durability and reliability. Numerous prestige buildings have been equipped with a Wefatherm system. Over 30 years of experience in water supply systems, focussing on innovation, quality and dedication: that is Wefatherm GmbH.

## Leading the way through innovation and

Wefatherm has always been focussed on innovation and quality, making 'Made in Germany' more than just a phrase by really living up to it. Offering a full range PP-R system and our latest development of injection moulded large bore fittings are the living proof of this.

### Quality products

The Wefatherm PP-R pipe system is developed and manufactured within an ISO 9001 Quality Assurance system and complies with the ISO15874 and DIN8077/8078 standards. And they are certified by DVGW and carries numerous international recognised approvals.

### Quality people

With a clear focus on meeting the demanding specifications of consulting engineers, the Wefatherm team is a key element in the successful delivery of our knowledge through consultation, support processes and the application of leading technologies.

Wefatherm is focused on delivering quality all the way from product to support.

The Wefatherm company and its modern production facilities are located in Beverungen in the district of Höxter in East Westphalia, Germany.

Wefatherm GmbH  
Urentalstraße 380 | 37688 Beverungen  
Germany

# quality

## Quality systems

Naturally, you want peace of mind after the design and installation of your water supply systems. Wefatherm's combination of up-front training of consulting engineers and installers, together with on-site project support and on-site inspections (if required) means that working with Wefatherm provides you with maximum quality installed.

Wefatherm water supply systems ensure:

- hygienic reliable drinking water
- long term undisrupted system use
- avoiding nuisance like noise
- preventing loss of water or wasting energy

Wefatherm offers two systems for floor distribution, riser mains and connections to risers.

d20-125 mm socket weld and electrofusion

d160-315 mm buttweld and electrofusion

# Setting the standard

## PP-R

For more than 30 years, Polypropylene Random Copolymer (PP-R) has been applied successfully for hot and cold water applications in countries worldwide. The combination of properties such as resistance to internal pressure, flexibility and impact have made PP-R the material of choice for safe and reliable long-lasting installations. No wonder that PP-R has been continuously replacing traditional materials like copper and galvanized steel over the last decades.

### Benefits of PP-R:

- Service life according to tests performed under ISO 15874
- No contact corrosion when exposed to iron particles
- Taste and odor neutral
- Bacteriologically neutral
- Fast and easy installation
- Entire plastic systems available
- Good chemical resistance
- Low tendency to incrustations

## PP-RCT

PP-RCT is the abbreviation for Polypropylene Random Copolymer with modified crystalline structure and enhanced temperature performance. The special fine and homogeneous crystal structure of the PP-RCT material improves the mechanical characteristics of the material.

### Benefits of PP-RCT:

- PP-RCT material has an improved stress resistance at elevated temperatures with a minimum required strength (MRS) value of 11,2 MPa. And more importantly, the critical required strength (CRS) at 70°C and 50 years is 5 MPa. PP-RCT pipe systems can be operated at higher operating pressures, ranging from factor 1,25 to 2,5 at temperatures >60°C.
- The improved long-term strength of the PP-RCT material leads to a more economic set of dimensions of the pipe system. It enables designers to select thinner wall pipes with an increased flow capacity or smaller diameter pipes.

Lighter pipe systems are easier and quicker to install.

Temp. (°C)	$\sigma$ N/mm <sup>2</sup>	$\sigma$ N/mm <sup>2</sup>	MRS factor
10	11,5	13,3	1,16
20	9,7	11,6	1,19
30	8,2	10,0	1,21
40	6,9	8,5	1,23
50	5,8	7,3	1,25
60	4,9	6,1	1,26
65	4,1	5,6	1,38
70	3,2	5,1	1,58
75 *	2,6	4,7	1,81
80 *	2,1	4,3	2,05
85 *	1,7	3,9	2,28
90 *	1,4	3,5	2,54
95 *	1,1	3,2	2,80

(\* life cycle <50 years)

- Also important, the substantially lower material usage provides an additional contribution to the conservation of resources supporting a sustainable environment.

# The right choice

For every application, temperature and pressure, Wefatherm offers the right type of pipe.

## Standard pipe

This is the traditional mono layer pipe as described in the standards ISO 15874 and DIN8077/8078. The international product certification applies on this pipe wall type.

- PP-R available in SDR 6 - 7,4 - 11
- PP-RCT available in SDR 7,4 - 11
- Thermal expansion factor 0,150 mm/m.K

*Mono layer*

PP-R d20-125 mm

PP-RCT d20-315 mm

---

## Fiber pipe

This is a three-layer pipe of which the middle layer is enforced with glass fiber.

The production of these pipes is continuously surveyed since 1998 by the South-German Plastics Centre (SKZ), Wurzburg.

- PP-R available in SDR 7,4
- PP-RCT available in SDR 9 - 11
- Thermal expansion factor 0,035 mm/m.K
- Less bracketing
- Higher thermal stability
